SETS INSTALLATION

Just a few more steps and you'll be on your way with SETS. Please provide your email at https://merge-education.com/success/ to receive your installation ID. And remember -- be sure to follow the instructions for getting started so you have an easy onboarding process.

The directors' tutorials on the Support page of this site are also very helpful.

1. **Print this page.**
2. Click Download Link, choose "Save file" (may take a few minutes, depending on your system).
3. Once download is complete, go to your downloads, right-click the SETS file, and choose "Open containing folder".
4. Move the .zip folder to your desktop.
5. Click "Extract All …" (extract the files from the zipped folder).
6. Open the new (unzipped) folder.
7. Double click "setup.exe".
8. If you don't have Microsoft Access 2013 or above, you will be asked to install a Microsoft app (free). Click Yes and allow it to install 2013 Runtime.
9. Continue with the installation. Allow it to open the ReadMe notes and the SETS app.
10. SETS (and all of the documentation) is now installed at Local Disk (C:) > SETS and a SETS shortcut icon is on your desktop.
11. Read the SETS_ReadMe-Director's Notes.rtf. This document will start you off with login information (including password) and get you started smoothly.
12. Your installation code is on the download page. Once you open SETS, type this code (including dashes) into the SETS form and SETS will be a fully licensed product.

We wish you and your program great success!

> **Mac Users Note:** As stated on the website, we do not provide ongoing support for Mac. However, the only issues identified to date are one or two error messages with shutdowns upon first use. If you receive these, be sure to switch data (home page) to the Sandbox before you begin.

If you have any difficulty with the downloading process, please contact us at setshelp@merge-education.com.
